Mian Talha Nayyar

Incident Response Engineer | Cyber Security | Network Engineer

Detects and responds to company-wide security incidents. Monitor and analyze emerging threats, vulnerabilities and exploits. Develop and implement scalable prevention security measures (detection, monitoring, exploitation). Microsoft Certified Systems Engineer with a growing background of design and development excellence responding to User Stories; creating compelling, customer focused digital touch points.

SKILLS

Splunk | Microsoft Sentinel | Python | SPL | Wireshark | AWS | CloudTrail | IAM | Lambda | EventBridge | KQL | React | IBM QRadar | Elastic Security | SIEM | EDR/XDR | Power Shell | Linux | OKTA | Entra ID | Active Directory | CrowdStrike | Forensics | Monitoring | IDS | IPS | MITRE | ISO27001 | SOC2

WORK EXPERIENCE

Security Operations Specialist

Voya Financial

Provide retirement plans, employee benefits, investment management, and insurance.

07/2023 - Present | NY

Accomplishments / Tasks

- Led end-to-end **cybersecurity incident response** efforts, investigating security incidents, anomalies, and potential threats across cloud infrastructure, applications, endpoints, and enterprise systems.
- Triage and investigate **45+** security alerts and incidents per week across cloud, endpoint, and enterprise systems using **Splunk** and **CrowdStrike**.
- Developed and optimized security detections, monitoring workflows, and incident response playbooks using **SIEM**, **EDR**, and **SOAR** technologies to accelerate threat identification and remediation.
- Built and tuned 100+ **SIEM** and **EDR** detections, reducing false positives by **35%**.
- Built **Python**-based security automation and investigative tooling to streamline alert analysis, incident triage, threat detection, and response workflows.
- Developed **Python** automation that turned **15-minute** manual investigations into **15-second** automated actions.
- Conducted **threat hunting** and **forensic investigations** using security **telemetry**, **network** data, and endpoint activity to identify attack patterns and develop high-fidelity detection rules.
- Authored incident response playbooks with engineering and infrastructure teams, cutting **MTTR by 45%**.
- Partnered cross-functionally with security, engineering, and infrastructure teams to improve incident response processes, security metrics, and operational readiness in a fast-paced SaaS environment.

Incident Response Engineer

RTCS

11/2021 - 06/2023 | NY

Accomplishments / Tasks

- Provide High-level support and monitor several security systems (e.g., **firewalls, email security mechanisms, data loss prevention systems, etc.**).
- Monitored and triaged **100+ high-fidelity alerts** per week across **firewalls**, **email security**, and **DLP systems**.
- Led investigation and containment of 3-5 escalated incidents per week, including **phishing**, **malware**, and **cloud threats.**
- Handling office environments with their **cybersecurity setup** and **troubleshooting**.
- Forensic investigation of **Phishing alerts**, **Cloud Security and Threat Analytics**, **Alerts for Malware or spyware.**
- Evaluate and recommend information security products, technologies, and procedures by proactively identifying problems and evaluating industry trends.

Software Developer

GAIN AMERICAN

Creating web solutions and prototypes, with a focus on UI design; successes revolve around: Translating high level technical features into prototype designs/documentations for clients. Conducting ongoing user testing to support functionality and usability.

06/2020 - 01/2021 | New York, NY

Accomplishments / Tasks

- Built a full-stack e-commerce website with user authentication, checkout, and database-backed user profiles.
- Implemented secure login and data storage for customer account information.
- Ran user testing to validate functionality and usability before release.

AWS CLOUD SECURITY PROJECTS

AWS Incident Response - Compromised IAM Key Detection

Hands-on AWS lab, full writeup and evidence at desikick.github.io/soc-analyst-portfolio

Accomplishments / Tasks

- Stood up an **AWS** environment with **CloudTrail** (multi-region management + **S3 data events**) and reconstructed a full leaked-access-key breach chain end to end from raw logs.
- Traced the attacker through recon (**GetCallerIdentity**, **ListBuckets**), **IAM** enumeration, and data access, then pulled **CloudTrail** JSON from **CloudShell** and parsed it with the **AWS CLI** and **jq** to build the timeline.
- Mapped activity to **MITRE ATT&CK**: T1078.004 (Valid Cloud Accounts), T1098 (Account Manipulation), T1530 (Data from Cloud Storage), and T1087 (Account Discovery).
- Wrote the cloud IR runbook: disable the key, scope blast radius via **CloudTrail**, rotate credentials, and preserve evidence.

AWS Automated Incident Response (EventBridge + Lambda)

Hands-on AWS lab, full writeup and evidence at desikick.github.io/soc-analyst-portfolio

Accomplishments / Tasks

- Built a serverless detection-and-response pipeline: **CloudTrail** to **EventBridge** rule to a **Python Lambda** that auto-disables a compromised **IAM** access key within seconds of a trigger event, with no human in the loop.
- Simulated a stolen-key attack (**EC2 RunInstances** cryptojacking, mapped to T1496 Resource Hijacking) and validated containment end to end, with a **CloudWatch** log line confirming the key was auto-disabled.
- Scoped **IAM** roles and least-privilege execution policy for the Lambda, and handled real-world constraints including **Service Control Policies** restricting services by region.

EDUCATION

Bachelor of Science in Information Technology

New York City College of Technology

06/2016 - 08/2020 | New York, NY

CERTIFICATES

Security Analyst Level 1 (SAL1)

TryHackMe

2026

Microsoft Security Analyst: SC-200

Microsoft

09/2026

Security +

CompTIA

In Progress
