> **Application for Cybersecurity Engineer / Incident Response Specialist**

Dear Hiring Manager,

I am writing to express my strong enthusiasm for the Cybersecurity / Incident Response position. With a proven track record leading end-to-end incident investigations, engineering high-fidelity detection rules, and orchestrating threat-hunting initiatives in enterprise cloud and hybrid ecosystems, I bring the technical depth and operational agility needed to protect mission-critical infrastructure against sophisticated threat actors.

In my role as a **Security Operations Specialist at Voya Financial**, I lead cross-platform incident response operations, diagnosing complex threats across endpoints, applications, and multi-cloud environments. Leveraging tools such as **Microsoft Sentinel, Defender XDR, Splunk, and CrowdStrike**, I have engineered automated playbooks and custom KQL/SPL detections mapped directly to the **MITRE ATT&CK framework**. My dual background in software engineering allows me to bridge the gap between detection and automation—authoring Python scripts and API integrations to automate telemetry enrichment, minimize dwell time, and significantly reduce mean time to detect (MTTD) and remediate (MTTR).

Key strengths and achievements I offer include:

- **End-to-End Threat Hunting & Forensics:** Conducted deep-dive PCAP network analyses via Wireshark and analyzed endpoint telemetry to uncover adversary persistence, lateral movement, and C2 beaconing.
- **Security Orchestration & Automation:** Architected automated Python/PowerShell workflows integrating threat intelligence feeds (e.g., VirusTotal API) with SOAR systems to immediately isolate compromised assets.
- **Enterprise Architecture & Governance:** Demonstrated mastery across IAM, Okta, Entra ID, Active Directory, and IDS/IPS implementations, aligning enterprise defense mechanisms with ISO 27001 and SOC 2 governance standards.
- **Certified Expertise:** Backed by a B.S. in Information Technology, a Microsoft Security Analyst (SC-200) certification, and a Microsoft Certified Systems Engineer credential.

What distinguishes my candidacy is my holistic approach to cybersecurity: I do not merely monitor alerts—I dissect root causes, build resilient defensive architectures, and collaborate cross-functionally with DevOps and infrastructure teams to ensure long-term mitigation. I am eager to leverage this proactive mindset to fortify your security posture and defend the organization against evolving threats.

Thank you for your time, consideration, and leadership. I welcome the opportunity to discuss how my hands-on threat detection, incident response, and security automation background can provide immediate value to your security operations team.

Sincerely,

Mian Talha Nayyar

B.S. Information Technology | Microsoft SC-200 Certified Security Analyst
